reports on a project that identifies pathogen routes of entry into water distribution systems and develops monitoring and control strategies for protecting the system contains chapters on pathogens and pathways existing control strategies transient surge modeling pressure monitoring field monitoring recommended control strategies and recommendations to utilities the project was completed by a multi disciplinary team of engineers and practitioners with funding from the american water works association research foundation and the environmental protection agency the book is not indexed annotation c book news inc portland or booknews com

low or negative pressure transients also called surge or water hammer create temporary opportunities for external chemical and microbial contaminants at higher pressure to enter the water distribution system creating potential health hazard and potential weakening of distribution pipes leading to failure this study investigates how such events as power outages pump shutdowns valve operations main flushing firefighting and main breaks can create significant rapid temporary drops in system pressure the report offers useful recommendations for using surge models to optimally locate pressure monitors and to minimize the occurrence and impact from low and negative pressure transients
